

## System Architect Generated Report

### Event Names and Descriptions

Event	Description
ESOH Issue Communication	A communication to responsible authorities that an issue of actual or potential ESOH concern exists. The communication may describe an event such as an accident or spill or refer to a set of circumstances of interest to the ESOH community (e.g., paint fumes, archeological discovery). The communication may be from the public, regulatory notices from authorities, or be identified as a result of an internal study or inspection.
End - Environmental Liability Process	End of the environmental liabilities recognition, valuation and reporting process. A message is sent to the Update Asset Record process step with the environmental liability cost information.
End - No Environmental Liability	Potential liability is deemed not an environmental liability because it is Remote, an Operational Cost or a Non Environmental Liability.
Evidence of Goods Tendered or Services Rendered	The information from provider which documents the tendering of goods or rendering of services.
Liability Update Requirement	The requirement to periodically update previously identified liabilities in support of the data for the annual financial statements.
Real Property Available for Use Notification	Contains notification information that the real property asset has been accepted and is usable as evidenced by the DD1354.
Real Property Operation Ceased Notification	Information of a real property asset that is deemed inactive but has not been declared as excess and approved for disposal.
Requirements Plan	A Requirements Plan is a concise document that identifies relevant issues and recommends an acquisition, management, and financial approach, as well as a support strategy that serves as the roadmap for life cycle sustainment, tailored to the specific needs of a program.
